- Contrast stitching (with double needle only)
- (4) Low profile casters
- (2) Fabrics

Coordinating wood tables and chairs available

Louis's frame components are machined into puzzle like pieces on state-of-the-art CNC equipment to within the tightest of tolerances. During the assembly process, these components lock together while commercial adhesives and mechanical fasteners are introduced to further enhance the construction. This process results in the most durable, robust and stable foundation from which to build upholstered furniture. Foam is commercial grade for comfort and resiliency. Fabric is upholstered to the frame with precision for a tailored fit and finish.
