Transitions bedroom furniture serves to support therapy objectives and improve environmental quality. Laminate tops are durable and easy to clean while all wood components are finished using our revolutionary ultraviolet (UV) coating. This top-coat will resist scratches, heat, UV light, bodily fluids and the heavy strength detergents meant to keep your facility clean against harmful bacteria and bloodborne pathogens. The natural red oak wood grain offers a warm and homelike feel that reflects a level of compassion and vigilance for patient welfare. Its ligature resistant design will help to provide a level of safety and security to promote empowerment, hope and quality of life. All cabinets are built using the latest technology in cabinet construction ensuring the highest level of quality and performance suitable for the care, treatment and services provided.
